         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                             490.5

Amersdorfer

P ;

New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.

Example 1; SEQ ID NO 88; 110pp; English.

XX The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone 25, C25, C39, IC6, 3D12, B4, IF3, huC25, Az1, Az2, WR1(V), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is

specifically bound by an antibody expressed by clones as mentioned in (I), producing (I); and a composition (III) comprising several antibotulinum neurocoxin antibodies, where each antibody is specific for a different epitope of a botulinum neurocoxin and the combination of

The following are disclosed: a pharmaceutical composition comprising (I), and a kit comprising (I) (I) is useful for neutralising south antibody and for neutralising a botulinum neurotoxin which involves contacting neurotoxin with (I) in specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I) enables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                               antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin polsoning; mouse; light chain variable region; single chain antibody; scFv.
                                                                                                     New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated
                                                                                                                                                                                              Marks JD,

                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                     CC clone where (I) binds to and neutralises botulinum neurotoxin type A (CC (BONT/A). An isolated antibody (I) that specifically binds to an epitope CC specifically bound by an antibody expressed by a clone chosen from clone CS5, C25, C39, 1C6, 3D12, B4, 1F5, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1, C3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum cc neurotoxin type A (BONT/A). Also described are: a polypeptide (II) comprising BONT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I), and a composition (III) comprising several anti-cc different epitope of a botulinum neurotoxin and the combination of antibodies hows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition (C comprising (I); and a kit comprising (I) (I) is useful for neutralising C BONT/A antibody and for neutralising a botulinum neurotoxin which (I) is specific for a different epitope of the botulinum neutrotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism (C specific for a different epitope of the botulinum neutrotoxin than the combination of antibodies associated with botulinum neutrotoxin (I) exhibits specificity and affinity towards BONT/A. (I) cenables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                   Query Match

```

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific

New isolated antibody that neutralizes botulinum neurotoxin type

WPI; 2004-652009/63.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone CC 9-8, C39, IC6, 3D12, B4, IF3, huC25, Ar1, Ar2, WR1(Y), WR1(T), 3-1, CC comprising BoNT/A neutralising epitope having an epitope that is grecifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several antication meurotoxin antibodies, where each antibody is specific for a cdifferent epitope of a botulinum neurotoxin and the combination of comprising (I); and a kit comprising (I) is specific for a comprising are disclosed: a pharmaceutical composition (I) comprising (I); and a kit comprising a botulinum neurotoxin which (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. Where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin constitution or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             र्

Preferably, the cell binding agent is the murine canti-CA6 monoclonal antibody DS6 or their epitope-binding fragments or a CC humanized version of the same. The cytotoxic agent is chosen from CC compounds, daunorubicin compounds, CC-1065 compounds, dolastatin CC compounds, daunorubicin compounds, CC-1065 compounds, dolastatin CC compounds by the production of compounds with a cytostatic, CC immunosuppressive or virucide activity acting as stimulators of CC apoptosis. The invention is useful for inhibiting growth of a cell CC expressing CA6 glycotope and may be used for treating a subject having a CC cancer (for example serous ovarian carcinoma, endometriod ovarian CC carcinoma, neoplasm of the uterine cervix, neoplasm of the endometrius, CC urothelium, in which CA6 glycotope is expressed or overexpressed. In CC addition, the invention may be useful for treating autoimmune diseases, CC graft rejections or viral infections. The present sequence is that of a CC region of the mouse ayl protein which was used to demonstrate homology with a region of the mouse DS6 antibody light chain protein during the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a method of recovering a polypeptide that unfolds CC reversibly from a repertoire of polypeptides that unfolds reversibly and CC has a common selectable characteristic that distinguishes folded CC polypeptides from unfolded or misfolded polypeptides. The method CC comprises: providing a polypeptide display system comprising the CC repertoire of displayed polypeptides; unfolding at least a portion of the unfolded CC polypeptides; and recovering at least a portion of the unfolded CC portion. The method is useful in recovering a polypeptide that unfolds CC reversibly and has the selectable characteristic from the refolded CC portion. The method is useful in recovering a polypeptide that unfolds CC reversibly from a repertoire of polypeptides that unfolds reversibly. The CC useful in the manufacture of a medicament for disgnosing, treating or CC useful in the manufacture of a medicament for disgnosing, treating or preventing a disease or medical condition mediated by a cytckine, crytckine receptor, enzyme, enzyme co-factor or DNA binding protein, such CC viral infection or an autoimune disorder, e.g., asthma, psoriasis, Type CC tidabetes, multiple sclerosis, rheumatoid arthritis, systemic lupus crythematosus, Crohn's disease, mysashhenia gravis, leukemia or solid cumor. This is the amino acid sequence of an immunoglobulin variable coregion associated with the protein purification method of the invention.

cc reversibly from a repertoire of polypeptides that unfolds reversibly and common selectable characteristic that distinguishes folded college polypeptides from unfolded or misfolded polypeptides. The method cc comprises: providing a polypeptide display system comprising the crepertoire of displayed polypeptides; unfolding at least a portion of the unfolded cc polypeptides; and recovering at least a portion of the unfolded cc polypeptides; and recovering at least a portion of the unfolded cc portion. The method is useful in recovering a polypeptide that unfolds creversibly and has the selectable characteristic from the refolded cc portion. The method is useful in recovering a polypeptide that unfolds creversibly from a repertoire of polypeptides that unfolds reversibly. The clibrary or repertoire is useful for selecting a polypeptide that crefolded cc polypeptide that unfolds reversibly and comprising an antibody format. The polypeptide that cc antibody variable domain that unfolds reversibly or a polypeptide that cc useful in the manufacture of a medicanent for diagnosing, treating or cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such case an inflammatory state, allergic hypersensitivity, cancer, bacterial or cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such case of unitable selectories, rheumatoid arthritis, systemic lugus crythematosus, Crohn's disease, myasthenia gravis, leukemia or solid cumor. This is the amino acid sequence of an immunoglobulin variable in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recovering a polypeptide that unfolds reversibly from a repertoire polypeptides for treating e.g., cancer, by unfolding a portion of tdisplayed polypeptides and refolding a portion of the unfolded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-MAY-2003; 2003US-0470340P

                                                                                                               CThe VK sequence is one of 23 (AAR21286-308) expressed from a single chain CC Fv library. The library produces a diverse repertoire of antibody CC fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using CC CDNA generated from mRNA from mice immunised with phox coupled to chicked Serum albumin. The VH and VL kappa sequences were separately amplified by CC PCR (AAQ23474-84) and ligated into fdCAT2 (AAQ23463) for expression on CC the phage surface as fusions with gene III. The resulting library of CC vH genes (A-H, AAR21264-71) in a variety of pairings with 7 Vk genes (a-g AR21286-92). Most clones were VH-B combinations so a further CC interarchical library was prepd. by "crossing" VH-B with the Vk clones sequenced. 14 new partners (AAR21293-308) for VH-B were CC identified. Nearly all the Vk genes were "ox-like", only f, (from the CC original library) and h, p, q, and r (from the hierarchical library) were CC values found. This suggests that phage bearing scFv fragments having weak CC values found. This suggests that phage bearing scFv fragments having weak CC culd also be isolated on a basis of antigen affinity. See also AAR21260-307, 309-311; AAR22450, 565-581

The present sequence is that of the light chain variable region of claimed anti-human RANK ligand (RANK-L) murine monoclonal antibody (mAb) 19H22 (isotype 1gG2b/Kappa). The mAb is produced by hybridoma cells obtained by immunising CB6 f1 mice with human RANK-L protein, and fusing spleen cells with X63-Ag8.653 myeloma cells. 19H22 mAb is specific for human RANK-L, having a binding affinity characterised by a dissociation constant of about 10 power -10 M. RANK-L is a member of the tumour necrosis factor family of proteins and a key regulator of the immune system, bone development and homeostasis. The invention provides altered, chimeric and humanised 19H22 antibodies, including Fab or F(ab')2 fragments, antibodies comprising the light and heavy chain variable regions of 19H22, and antibodies comprising the complementarity determining regions of 19H22. These are used in methods for the

Methods are also provided for the recombinant production of the antibodies, using isolated nucleic acids and transfected host (preferably mammalian) host cells, and a method of diagnosing conditions associated with Thi T-cell activity or osteoclast development and activation, in particular those listed above
The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone $25, C25, C39, IC6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; SEQ ID NO 72; 110pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Marks
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-AUG-1998; 98US-00144886.

The following are disclosed; a phramaceutical composition of antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed; a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is useful for neutralising a botulinum neurotoxin which is involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin pathologies associated with botulinum neurotoxin poisoning. (I) exhibits specificity and affinity towards BONT/A. (I) enables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin

Anti-epidermal growth factor receptor antibodies constructed from anti-EGFR Claim 4; Page 60-61; 93pp; English.

(EGFR) single chain antibodies antibody fragments can be used

diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical compostion for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. They are produced using the phage antibody AAT04011-T04026 and AAR79858-R79873)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 244 AA;
                                                                                     This invention relates to the novel treatment of an autoimmune disease that utilises an antibody/ autoantigen construct. Specifically, it refers to a peptide autoantigen that is linked to an antibody raised against an antigen presenting cell (APC) receptor. The present invention describes a method for treating diabetes mellitus by inducing an immune tolerance to an autoantigen, which can be chosen from glutamic acid decarboxylase (GAD), insulin or a heat shock protein (HSP), as well as epitopes derived from each thereof or beta cell antigens that are linked to an APC
                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating an autoimmune disease comprises providing an antibody/autoantigen construct containing an autoantigen linked to an antibody to a receptor of an antigen presenting cell and administering the construct to a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-MAR-2003; 2003US-0451816P.

                                                                                                                                                                                                                                                                                                                                                                                                                                              autoantigen construct then works to interfere with the interaction between the APC and immune cells such ad autoreactive T cells, and hence inhibits T-cell proliferation. Accordingly, such compositions exhibit antidiabetic and immunosuppressive activities and can be used in the development of vaccines. Note that the single chain antibodies (scFVs) used in this specification contain both variable light and heavy chain regions connected by a linker, their short length makes these antibody fragments particularly suitable for antigen linkage, and the capacity for binding to the receptor is preserved. This polypeptide sequence is a light chain murine anti-human L-SIGN (hL-SIGN) antibody protein of the

```

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone \$25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(Y), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning. Example 1; SEQ ID NO 93; 110pp; English

WPI; 2004-652009/63.

The following are disclosed: a pharmaceutical composition (C comprising (I); and a kit comprising (I). (I) is useful for neutralising BoNT/A antibody and for neutralising a botulinum neurotoxin which composition of involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin pathologies associated with botulinum neurotoxin corresponding. (I) exhibits specificity and affinity towards BONT/A. (I) enables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Anti-epidermal growth factor receptor (EGFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. They are produced using the phage antibody 1.34704011-T04026 and AAR79858-R79873)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Single chain antibody; antibody; epidermal growth factor receptor; EGFR; tumour; cancer; glioma; melanoma; carcinoma; diagnosis; assessment; phage antibody library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-epidermal growth factor receptor (BBFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. They are produced using the phage antibody labrary. (See AAT04011-T04026 and AAR79858-R79873)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
The VK sequence is one of 23 (AAR21286-308) expressed from a single chain Fv library. The library produces a diverse repertoire of antibody fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using cDNA generated from mRNA from mice immunised with phox coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by PCR (AAQ23474-84) and ligated into fdCAT2 (AAQ23463) for expression on
                                                                                                                                                                                                                                                                                                                                                                                                        Mccafferty J, Pope AR, i Jackson RH, Holliger KP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-JAN-1992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO9201047-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Binding-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Binding-site
